and Tides) This is a recreation of the classic experiments of Connell on why the barnacles *Chthamalus* and *Balanus* have distinct distributions in the rocky intertidal zone of Scotland. Students first observe the distributions, then try to tease apart the causes through a series of removal and transplant experiments.

lab, you will visit a hypothetical seashore to investigate the role of the environment on barnacle survival. Barnacles are shelled animals that attach themselves to solid objects (rocks, docks, etc.) at the seashore. They feed on small organisms that they catch by raking the water with the setae on their legs.
