Clinical Pharmacology Of Drug Dependence

Physical dependence is a condition in which the body has adjusted to the presence of a drug, resulting in clear symptoms of withdrawal when its use stops. In extreme cases, the effect of rapid withdrawal can be life threatening because the body has become so dependent on the drug as to interfere with normal body processes.

Drug pharmacology: effects, tolerance and dependence

Drug dependence is defined as a psychic and physical state of the person characterized by behavioral and other responses resulting in compulsions to take a drug, on a continuous or periodic basis in order to experience its psychic effect and at times to avoid the discomfort of its absence. From: Illustrated Toxicology, 2018.
